15th May – 22nd July 2025

IIHMR Delhi partnered with UNICEF and IIT Bombay to launch the course on Digital Health Enterprise Planning course, a 10-week programme built to bridge the gap between healthcare professionals and new digital technologies.

Healthcare professionals explored a range of topics, from telemedicine and electronic health records to data analytics and artificial intelligence in healthcare. They learned how to leverage digital health technologies to enhance patient care, improve clinical workflows, and optimize healthcare outcomes. Additionally, professionals delve into regulatory and ethical considerations surrounding digital health implementation, ensuring adherence to standards and patient privacy.

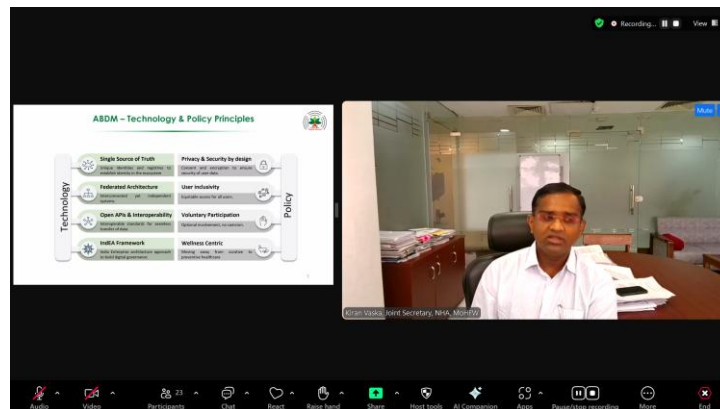

The participants were selected based on nominations from state government working in health space or digital health interventions. The criteria encompassed individuals working in the sector with experience of at least 5 years for the test phase. The nominations were also done in Southeast Asia with participants joining from Afghanistan.

The course met with enthusiasm from various healthcare professionals working to bridge the gap between traditional practices and new digital era interventions. In India participants joined from State of UP, Maharashtra, Rajasthan, Gujarat, Telangana, Delhi. The course was completed in 10 weeks with live lectures every Tuesday and Thursday.

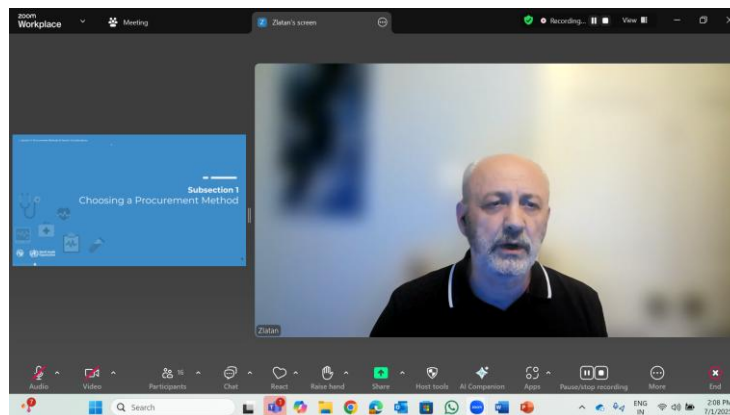

The knowledge and expertise gained from the digital health course empowers healthcare professionals to lead and thrive in a rapidly evolving healthcare landscape, delivering high-quality care and improving health outcomes for patients.

Glimpses from Program

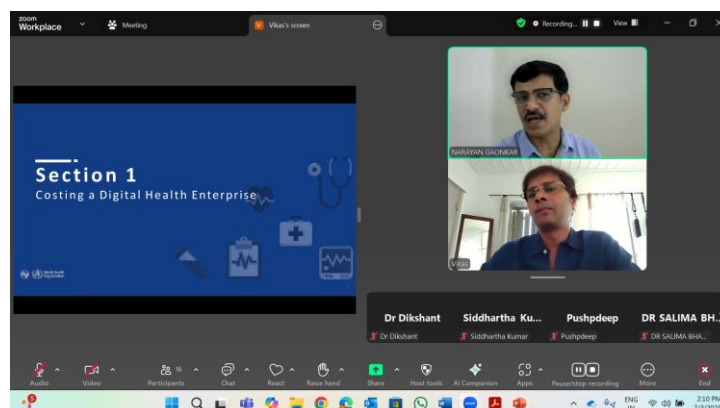

Session by Joint Secretary ABDM

Session by International Expert

Session by experts from partners (UNICEF & IITB)
