

PH-05 ONLINE MANAGEMENT DEVELOPMENT PROGRAM ON URBAN HEALTH, PLANNING AND SUSTAINABILITY Date: January 6-8, 2021 (1:30 – 5:30 PM)

RATIONALE:-

Increasing urban population and Growing urbanization is posing a serious public health challenge to the leadership of the country as the access to basic services of health care and health determinants is becoming an important indicator of urban governance.

Health in urban areas has played a pivotal function in shaping flight of Demographic growth and Economic triumph of community and individual well-being across the history. However, the Dynamic relationship between health and urban space is always changing and in return changing the urban landscape of the cities. In early twentieth century, towns and cities acted as 'demographic sinks', illustrated by high death rates largely due to lack of Health-hygiene and water-borne infections. Lately the improvement of better preventive and curative medical care in cities leads to lower mortality than their surrounding areas.

Apathy towards urban health, has led to limited reach of poor to quality health care services. Moreover, the multiple stakeholders operating in urban settings lead to weak coordination and convergence of urban poor and urban basic infrastructure services. Healthy cities cannot be built without systematically addressing the vulnerability of urban population. WHO Healthy Cities programme is also emphasizing on addressing equity and the social determinants of health through integrative policy making and planning. The recent initiatives of AMRUT and Smart cities are the way forward for the Smart and Healthy urban life.

Today, COVID-19 is a major threat to human health and How Urban inequalities shape-Up the exposure, vulnerability, and eventually the risk and outcome of infectious diseases in low income and vulnerable population. In view of the above, this course is designed to train the participants, in capacity building for managing the city/urban areas efficiently and effectively.

OBJECTIVES

To build leadership and management competency for professional working in urban health to develop, implement and strategize urban health programme.
